

FHS

Filesystem Hierarchy Standard

Rahmat M. Samik-Ibrahim

<http://rms46.vlsm.org/2/180.pdf>

(rev. 2010-05-17-02)

Presentasi ini dikembangkan dengan OpenOffice.org 3.2

Memperkenal Diri

- **Rahmat M. Samik-Ibrahim**
 - UI (1984 - ...)
 - Linux (1994 - ...)
 - VauLSMorg (1996 - ...)
- **Web:**
 - <http://RahmatM.Samik-Ibrahim.vLSM.org/>
- **Linux Counter**
 - <http://counter.li.org/>
 - Linux Counter #15059
 - **Get Counted!**

Agenda

- Memperkenal Diri
- Perangkat Lunak Bebas (PLB)
- Sistem Berkas
- Konsensus Penamaan Folder Windows
- FHS: Konsensus GNU/Linux
- FHS: Ilustrasi

Definisi PLB menurut *FSF* (Perangkat Lunak Bebas)

- **KEBEASAN 0:** menjalankan program untuk keperluan apa pun
- **KEBEASAN 1:** mempelajari cara kerja dan modifikasi (kode) program
- **KEBEASAN 2:** menyebar-luaskan program
- **KEBEASAN 3:** meningkatkan kinerja + sebar luas
- **URL:** <http://www.gnu.org/philosophy/free-sw.html>

OOT: Mesin Foto Kopi

- Mesin Foto Kopi Modern
 - Sebagai Scanner
 - Sebagai Mesin Fax
 - Sebagai Penyimpan Data
 - Berwarna!
- Memiliki **HARD DISK!**
 - Faktor Keamanan?
 - Faktor Privasi?
 - Fakta: Sistem Sewa/Lease!
- Kasus: ...

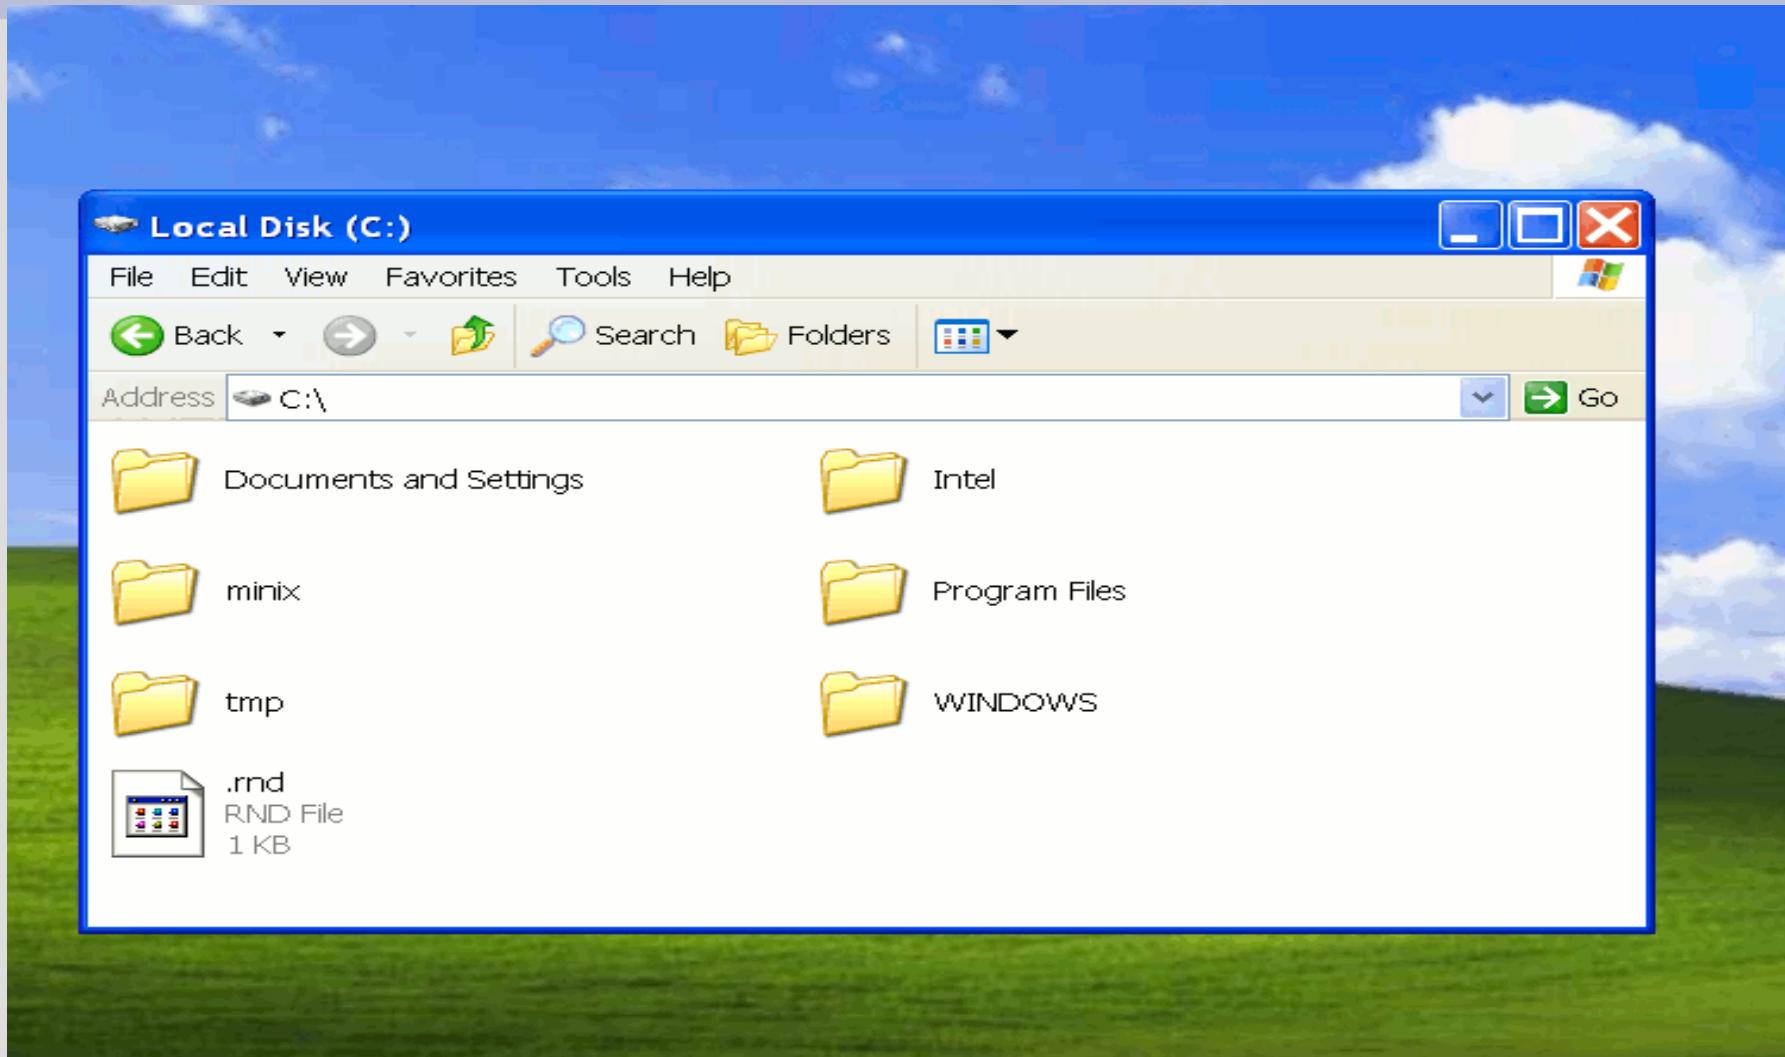

Sistem Berkas (File Systems)

- Cara mengelola, menyimpan, serta menamakan berkas-berkas (file) sebuah komputer pada sebuah media
- Media:
 - disk magnetik
 - CDROM
 - USB Flash Disk
- Sistem Operasi
 - Windows: FAT-12, FAT-16, FAT-32, NTFS
 - GNU/Linux: EXT2, EXT3, EXT4, REISER
 - Jaringan: NFS, SMB.

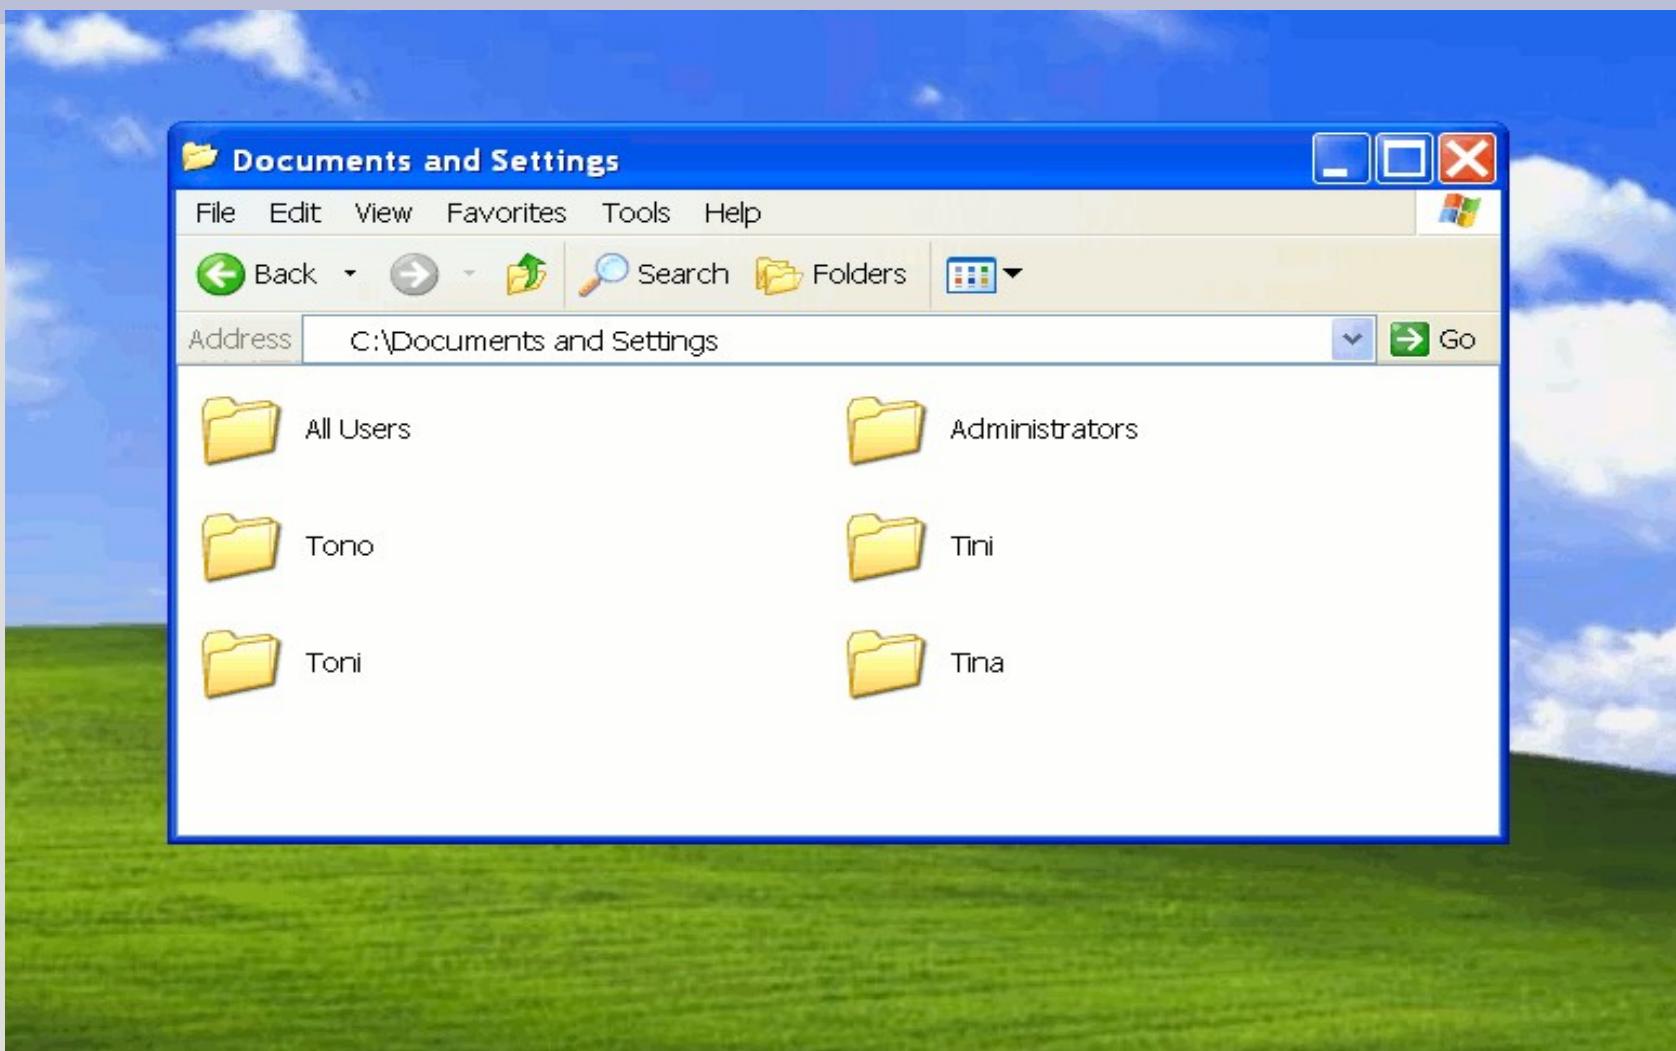

Konsensus Penamaan Windows

- Volume Sistem Berkas
 - “C:”
 - “D:”
 - “Z:”
- Folder Utama
 - Windows
 - Program Files
 - Documents and Settings

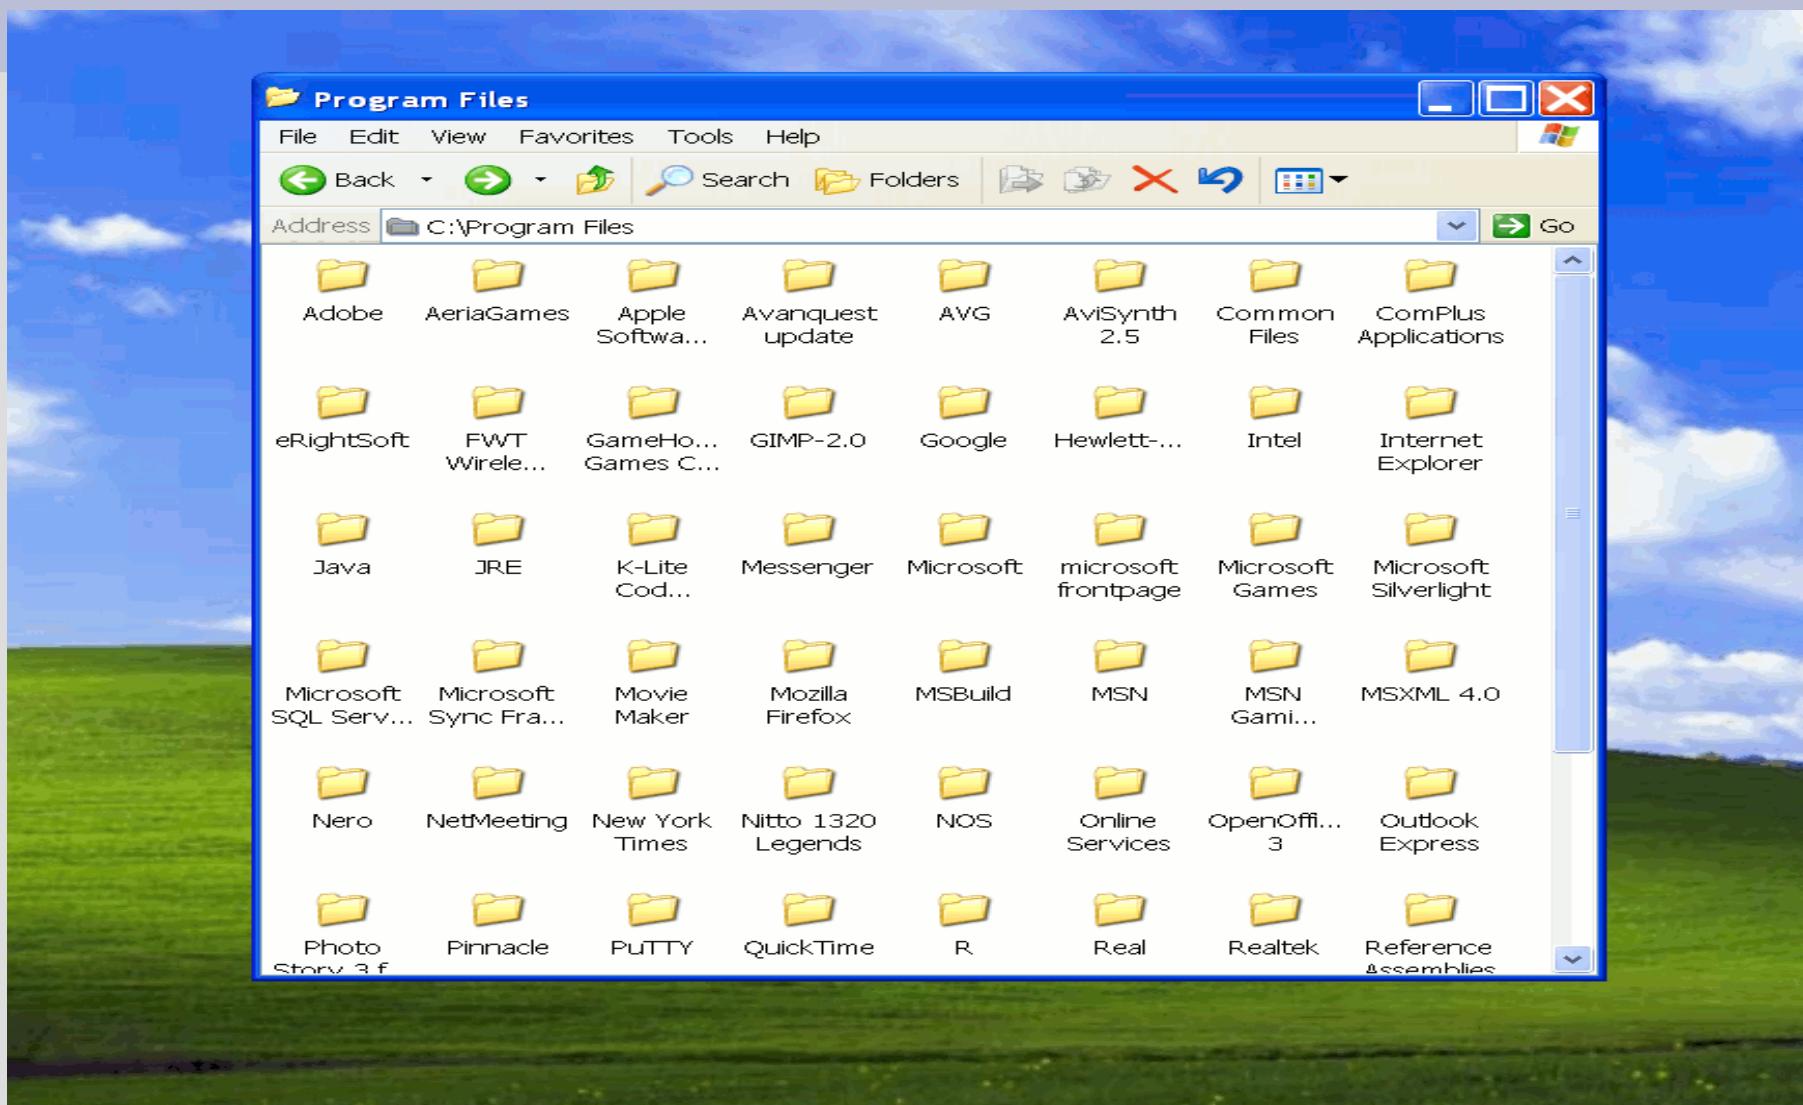

Isi Disk "C:\"

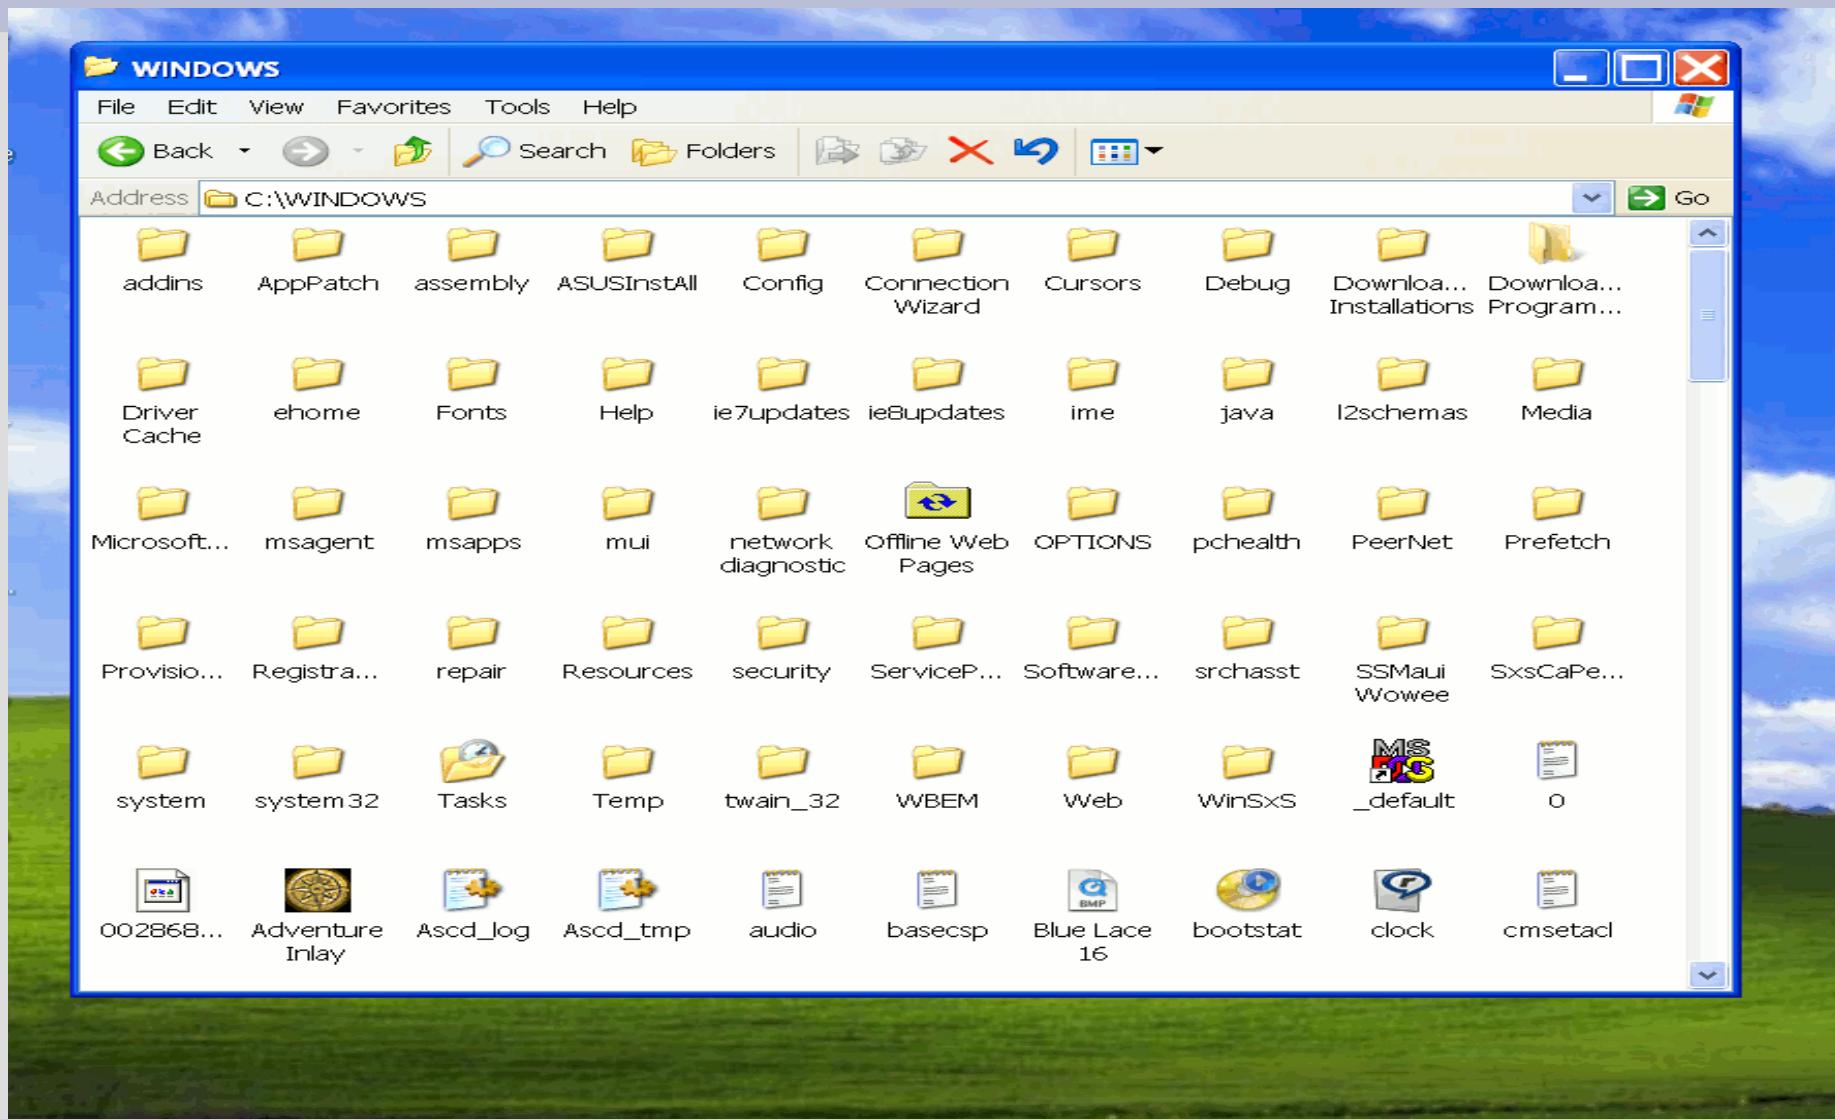

C:\Documents and Settings

C:\Program Files

C:\WINDOWS

Bagaimana Dengan GNU/Linux?

- Mengadaptasi Tradisi Unix
 - sistem berkas tunggal
 - tanpa multi-volume “C:”, “D:”, “E:”,...
 - konsensus penamaan direktori dan berkas
- Lain Padang, Lain Belawan
 - Lain pula Lubuk Linggau
 - Lain Distribusi (Distro), lain pula aturannya
- Diperlukan Sebuah Konsensus
 - FHS: Filesystem Hierarchy Standard

Filesystem Hierarchy Standard

- URL: `http://www.pathname.com/fhs/`
 - Petunjuk penempatan dan penamaan berkas
 - Versi terakhir: 2.3 (Januari 2004)
- Tujuan FHS:
 - sebuah rujukan pengelolaan sistem berkas
 - memprediksi lokasi sebuah berkas
- Metoda FHS:
 - petunjuk spesifikasi jenis sistem berkas
 - petunjuk minimal yang diharapkan ada
 - petunjuk pengecualian
 - petunjuk sejarah hal-hal yang tidak konsisten

FHS

- Digunakan oleh GNU/Linux, Unix, serta sistem operasi lainnya yang berbasis POSIX
- Sebagai petunjuk praktis setiap kali ingin menambah atau menghapus sebuah berkas/direktori
- Memudahkan para pengguna (user) dan perangkat lunak (software) untuk memprediksi ke mana mencari sebuah berkas.
- Bersifat sukarela tanpa dapat dipaksakan

FHS Compliance

- Requirements
 - harus ada
 - harus pada tempatnya
- Specific Options
 - boleh ada
 - jika ada, harus pada tempatnya

Jenis Sistem Berkas

- Shareable vs Un-shareable
 - Apakah berkas/direktori dapat dibagi antara komputer?
 - Shareable: aplikasi seperti OpenOffice.org, HOME, EMAIL
 - Un-shareable: berkas konfigurasi, berkas spesifik lokal.
- Static vs Variable
 - Apakah berkas bersifat “baca saja” atau “baca/tulis”?
 - Static: Aplikasi
 - Variable: Log, Berkas User.

Contoh FHS

| | | |
|-----------------|------------------------------|-----------------------|
| Static | /usr /opt | /etc /boot |
| Variable | /var/mail /var/spool/news | /var/run /var/lock |

Diadaptasi dari panduan FHS 2.3

ROOT “/”

- harus ada
- tempat menancap (mount) sistem berkas lainnya
- minimalis:
 - dahulu: pertama kali exists (sekarang: ada ramfs)
 - sistem operasi (untuk boot)
 - utilitas minimum (mount, recover, restore)

ROOT REQ (UNSHAREABLE)

| | |
|--|----------------------------|
| /bin | Essential command binaries |
| /boot | Static boot loader files |
| /dev | Device files |
| [/etc, /lib, /media, /mnt, /opt, /sbin, /srv, /tmp, /usr, /var] | specified |

ROOT SPECIFIC OPTIONS

| | |
|-------|----------------------------|
| /home | User home directories |
| /lib* | Alternate format libraries |
| /root | Root user home directory |

/USR (SHAREABLE, STATIC)

REQUIRED

| | |
|---------------------|-------------------------------|
| /usr/bin | Most user commands |
| /usr/include | C header files |
| /usr/lib | Libraries |
| /usr/sbin | Non-essential system binaries |
| /usr/local | Host-specific |
| /usr/share | Architecture-independent |

SPECIFIC

| | |
|-------------------|--------------------------------|
| /usr/X11R6 | XWindow System |
| /usr/games | Games and educational binaries |
| /usr/lib* | Alternate format libraries |
| /usr/src | Source code |

/bin REQUIREMENTS

| | |
|-----------------|---|
| cat | Utility to concatenate files to standard output |
| chgrp | Utility to change file group ownership |
| chmod | Utility to change file access permissions |
| chown | Utility to change file owner and group |
| cp | Utility to copy files and directories |
| date | Utility to print or set the system date and time |
| dd | Utility to convert and copy a file |
| df | Utility to report filesystem disk space usage |
| dmesg | Utility to print or control the kernel message buffer |
| echo | Utility to display a line of text |
| 0 | Utility to do nothing, unsuccessfully |
| hostname | Utility to show or set the system's host name |
| kill | Utility to send signals to processes |
| ln | Utility to make links between files |
| login | Utility to begin a session on the system |
| ls | Utility to list directory contents |
| mkdir | Utility to make directories |

| | |
|---------------|--|
| mknod | Utility to make block or character special files |
| more | Utility to page through text |
| mount | Utility to mount a filesystem |
| mv | Utility to move/rename files |
| ps | Utility to report process status |
| pwd | Utility to print name of current working directory |
| rm | Utility to remove files or directories |
| rmdir | Utility to remove empty directories |
| sed | The `sed' stream editor |
| sh | The Bourne command shell |
| stty | Utility to change and print terminal line settings |
| su | Utility to change user ID |
| sync | Utility to flush filesystem buffers |
| 1 | Utility to do nothing, successfully |
| umount | Utility to unmount file systems |
| uname | Utility to print system information |

/etc: Host-specific system configuration

| | |
|------------------|--|
| /etc/opt | Configuration for /opt |
| /etc/x11 | Configuration for the X Window system (optional) |
| /etc/sgml | Configuration for SGML (optional) |
| /etc/xml | Configuration for XML (optional) |

/etc

| | | | |
|--------------------|--|--------------------|---|
| csh.login | Systemwide initialization file for C shell logins (optional) | ld.so.conf | List of extra directories to search for shared libraries (optional) |
| exports | NFS filesystem access control list (optional) | motd | Post-login message of the day file (optional) |
| fstab | Static information about filesystems (optional) | mtab | Dynamic information about filesystems (optional) |
| ftpusers | FTP daemon user access control list (optional) | mtools.conf | Configuration file for mtools (optional) |
| gateways | File which lists gateways for routed (optional) | networks | Static information about network names (optional) |
| gettydefs | Speed and terminal settings used by getty (optional) | passwd | The password file (optional) |
| group | User group file (optional) | printcap | The lpd printer capability database (optional) |
| host.conf | Resolver configuration file (optional) | profile | Systemwide initialization file for sh shell logins (optional) |
| hosts | Static information about host names (optional) | protocols | IP protocol listing (optional) |
| hosts.allow | Host access file for TCP wrappers (optional) | resolv.conf | Resolver configuration file (optional) |
| hosts.deny | Host access file for TCP wrappers (optional) | rpc | RPC protocol listing (optional) |
| hosts.equiv | List of trusted hosts for rlogin, rsh, rcp (optional) | securetty | TTY access control for root login (optional) |
| hosts.lpd | List of trusted hosts for lpd (optional) | services | Port names for network services (optional) |
| inetd.conf | Configuration file for inetd (optional) | shells | Pathnames of valid login shells (optional) |
| inittab | Configuration file for init (optional) | syslog.conf | Configuration file for syslogd (optional) |
| issue | Pre-login message and identification file (optional) | | |

Lainnya (1)

- /opt
 - paket-paket
- /usr/local dan /var/local
 - serupa /usr dan /var, untuk keperluan “lokal”.
- /usr/share
 - dokumentasi (arsitek independen)
- /var
 - variable

Lainnya (2)

- /srv
 - servis melalui jaringan
 - /srv/www
 - /srv/ftp
 - /srv/samba
- NON FHS
 - /lost+found
 - hasil korupsi
 - /proc
 - data internal kernel/proses
 - /sys
 - perangkat keras

TERIMA KASIH!
